What is the probability of drawing an Ace?

$$\frac{\text{Ace ♣} + \text{Ace ♥} + \text{Ace ♦} + \text{Ace ♠}}{52 \text{ Cards}}$$

$$P(A) = \frac{4 \text{ aces}}{52 \text{ total cards}} = \frac{1}{13}$$

Now we remove an Ace of Spades (Ace ♠) from the deck. What is the new probability of getting an Ace?

$$\frac{\text{Ace ♥} + \text{Ace ♦} + \text{Ace ♣}}{\text{All the cards except Ace ♠} (51 \text{ cards})}$$

$$P(A|A\spadesuit) = \frac{3 \text{ aces}}{51 \text{ total cards}} = \frac{3}{51}$$
