

P12 - 2.10 - Lie Detector Test Notes

	$L: Lied$	$\bar{L}: Did \text{ Not Lie}$	Total
$P: Positive$	42	18	60
$N: Negative$	10	30	40
Total	52	48	100

$P: Indicated a lie$
 $N: Indicated did not lie$

Probability select 2 liars in a row.
 $p(L, L) = \frac{52}{100} \times \frac{51}{99} = 0.268$

$$P(L) = \frac{52}{100} \quad P(\bar{L}) = \frac{48}{100} \quad P(P|L) = \frac{42}{52} \quad P(P|\bar{L}) = \frac{18}{42} \quad P(P) = \frac{60}{100} \quad P(N) = \frac{40}{100} \quad \text{Given*}$$

$$P(P|L) = \frac{P(L \cap P)}{P(L)}$$

$L: Lied$
42
10
52

$$P(\bar{L}|P) = \frac{P(P \cap \bar{L})}{P(P)} = \frac{\frac{18}{100}}{\frac{60}{100}} = \frac{18}{60} = 0.3 \quad \text{False Positive}$$

$$P(P|L) = \frac{42}{100}$$

$$\frac{42}{52} \quad \text{Given the subject lied there is a 0.808 probability of getting a positive test result}$$

$$P(P|L) = \frac{52}{100}$$

$$P(P|L) = 0.808 \quad \text{A correct result}$$

$$P: Positive \quad 42 \quad 18 \quad 60$$

$$P(N|\bar{L}) = \frac{P(N \cap \bar{L})}{P(\bar{L})} = \frac{\frac{30}{100}}{\frac{48}{48}} = \frac{30}{48} = 0.19$$

$\bar{L}: Did \text{ not Lie}$
18
30
48

$$A \text{ correct Result}$$

$$P(L|N) = \frac{P(N \cap L)}{P(N)} = \frac{\frac{10}{100}}{\frac{40}{100}} = \frac{10}{40} = 0.4$$

False Negative

$$N: Negative \quad 10 \quad 30 \quad 40$$

$$P(L|P) = \frac{P(P \cap L)}{P(P)}$$

$P(L P) = \frac{42}{60}$
$P(L P) = 0.7$

$$P(L|P) = \frac{42}{100}$$

$$\frac{42}{52} \quad \text{Given the subject tested positive there is a 0.7 probability that they lied.}$$

$$P(L|P) = \frac{42}{60} = 0.7$$

Backwards

$$P(L|P) = \frac{P(P \cap L)}{P(P)}$$

$$P(L|P) = \frac{P(P|L) \times P(L)}{P(P|L) \times P(L) + P(P|\bar{L}) \times P(\bar{L})}$$

$$P(L|P) = \frac{\frac{42}{52} \times \frac{52}{100}}{\frac{42}{52} \times \frac{52}{100} + \frac{18}{48} \times \frac{48}{100}}$$

$$P(L|P) = \frac{42}{60} = 0.7$$
